## "40-Year Cycle Transition - 2021 Finale"

### Outlook 2021/2022

#### 40-Year Cycle Transition

**07-28-21** - Throughout the past decade, *INSIIDE Track* has discussed the uncanny 40-Year Cycle and its relationship to recurring events such as 'Currency Wars'.

The focus was on the period from 2016 - 2021, with expected parallels to 1976 - 1981, 1936 - 1941, 1896 - 1901, 1856 - 1861, 1816 - 1821 & 1776 - 1781.

One key aspect of this was the forecast that Gold would bottom in late-2015 and then enter a 5 - 6 year bull market beginning in early-2016. That was forecast to create an advance into 3Q '20 and potentially into May '21 - encompassing the majority of that 2016 - 2021 period.

The following is an excerpt from the Jan. 2014 publication: *2016 - The Golden Year* - written to prepare readers for a new bull market in Gold AFTER remaining downside was seen into the second half of 2015:

**Jan. 2014** - "With Gold & Silver just coming through a pivotal cycle - midway between 3--5 year cycle highs in 2011 and 3--5 year cycle lows in **mid-2015** - it is an appropriate time to pull together some key analyses from the past couple years and look ahead to what could be the most decisive cycle - in **2016**.

**2016** is the culmination of almost every 40-Year Cycle, dating back to 1776 and flowing through to 1976 (when the Jamaica Accord officially de-linked the Dollar from Gold) and is the likely time for Gold to enter a new bull market. It may set its lowest low in **2015**, but the real bull market is likely to be triggered in **2016**...

#### The Golden Year

In light of a myriad of diverse and/or related cycles, **2016** should be viewed as the 'Golden Year'. That is when so many cycles culminate and/or transition (often the most volatile period in a cycle).

If you look back at the recurring 40-Year Cycle, you should notice that the '6<sup>th</sup>' year is when the stuff really hit the fan. Following the Boston Tea Party of 1773, it was the American Revolution in 1776 that cast the die for the ensuing 200+ years. It was the first major battle in what would eventually morph into a move toward a global monetary monopoly.

The next major battle was a more insidious one, ultimately lost in **1816** when the Second National Bank (Bank of the United States) was chartered.

Since this would ultimately lead to a control of the currency and a rejection of Gold & Silver, it was a pivotal and devastating battle that resulted in almost 200 years of the 'papers' battling the metals and the fiats battling the hards. **1816** was the loss of a major battle for Gold & Silver...

In the 1850's, the US was again fighting the battle against Gold & Silver, reducing the weight of Silver in coins and effectively devaluing the currency. This resulted in **1857**, in the suspension of acceptance of payment in Silver. Another battle lost by Gold & Silver...

**1896** was the political battle over Gold's place in backing the US Dollar. William Jennings Bryan built his campaign around his goal and his pledge to end the Gold Standard. He lost. Gold won an important battle, when it looked like the integrity of the currency was down for the count...

However, Franklin Roosevelt took up William Jennings Bryan's cause but wisely waited until after being elected to show/play his hand. In 1933--1934, he banned the private holding of real money (Gold & Silver) and confiscated the citizens' real wealth...

The banking battle against Gold had been won (in **1816**).

The political/practical battle against Gold & Silver was won (in **1856**).

And now, after a lone victory for Gold in **1896**, the psychological/emotional battle against Gold & Silver was won in **1936**.

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

*All that was left was to encode this into US & international law... exactly 40 years later.*

*Along came 1973, when a replacement was found for Gold... Oil (and the three 'D's - debt, debt & debt).*

*1973--1975 saw the phased-in agreement to price oil in US Dollars - effectively backing the US Dollar with oil - since a new backer was needed before the old one could be completely annihilated.*

*So just in case anyone missed the intention of this Oil/Dollar agreement, along came the Jamaica Accord in 1976 - an international agreement, delinking Gold from the US Dollar...*

*From a timing perspective, 3--6 month swings are likely to remain in force with Gold & Silver expected to turn back down in **3Q 2014**, set an important low in **4Q 2014**, set another descending high in **1Q 2015** and - if those intervening cycles corroborate - set a 3--5 year low in **3Q 2015**...*

*With respect to Gold, the focus should be on **3Q 2014** and **2Q/3Q 2015** - as far as timing - and **~1130.0--1155.0/GC & 14.650/SI** as far as price (targets that have been detailed since 2011). If those 3--5 year downside targets are hit before **2Q 2015**, it would usher in the possibility for a drop to **1033--1045.0/GC** - where other important wave, retracement & projection levels align."*

Gold and Silver did vacillate throughout 2014 & 2015 with Gold dropping to 1133/GC in Nov '14 and breaking below 1130/GC in mid-2015 - projecting a spike down to **1033 - 1045/GC**.

It reached and bottomed at 1046.2/GC in late-2015 and then ushered in 2016 - what was forecast to be *The Golden Year* and trigger the first leg of a 5 - 6 year advance and the largest rally in several years.

### East Meets West?

One of the overriding factors in these *currency wars* - and the primary objective to unseat the US Dollar as global currency kingpin - is the role that China has

played and will play in this 'battle'. Some times, their role is the result of *direct* and intentional actions. Other times, it is more of an *indirect* role.

That *indirect* role was seen in the second half of 2015 - ushering in 2016 - 2021, the primary focus of the *40-Year Cycle* - and could be recurring in the second half of 2021, a near-perfect bookend around that *40YC of Currency Wars* time period.

In June 2015, Chinese stocks peaked and began to roll over to the downside. Global stocks noticed but did not react too sharply. Some US stocks and indexes (including the DJIA) peaked in May/June '15 and were going through a topping process (*like 2021?*).

July '15 saw additional selling in the Chinese stocks and mounting losses in global equities. However, not all US indexes were impacted. The S+P 500 created a double-top as the Nasdaq-100 spiked to higher highs during the final third of July (specifically, in the 1-week period between July 20 - July 27).

*Then August '15 arrived...*

Chinese stocks plummeted; global stocks plummeted; US stocks plummeted... with the Nasdaq-100 losing about 20% in a 5-week period.

In 2021, there are some noticeable *similarities* (and some sharp *contrasts* as well).

Chinese stocks sold off in June '21 and accelerated lower in July '21.

US stocks were mixed with the DJTA peaking in May '21 and initially selling off into intermediate cycle lows on July 19...

There are other factors corroborating this. Hong Kong's Hang-Seng Index provided a textbook rebound peak on June 28/29 near **29,400** and was projected to undergo a sharp 3 - 5 week plunge during the month of July (leading into early-Aug.)

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

Here's what the July '21 INSIIDE Track stated, warning about an impending sell-off in Chinese and Asian equity markets that could resemble July '15:

*"China's Shanghai Composite Index remains in corrective mode after peaking in Feb. '21 while fulfilling a ~13-month low (Dec. '18) - high (Jan. '20) - high (Feb. '21) Cycle Progression... setting up for another sell-off in July/Aug '21 - based on cycles, weekly trend action and weekly 21 MAC.*

*This is exhibiting eerie similarities to mid-2015 when Chinese equities led a sharp correction in global stocks - with Aug '15 timing an accelerated decline (when the DJIA and others finally joined in). That overall drop stretched into year-end '15 with a spike low in early'16.*

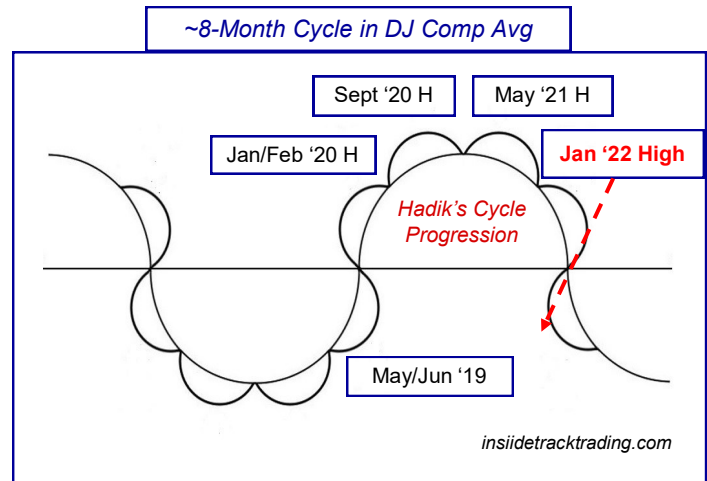

*The SSE Index saw similar sell-offs in 2018 and 2012 - creating a 3-year cycle that has timed significant sell-offs in the second half of each of those years (some stretching into the first quarter of the ensuing year - 2013, '16, '19 & 2022?)...*

*Hong Kong's Hang Seng Index remains on track to move lower into Aug./Sept. '21 - when monthly cycles converge. Weekly cycles first converge in **early-Aug '21**, so a sharp 3 - 5 week sell-off is becoming more likely as the month of July begins. This index just tested its now-declining weekly 21 High MAC (~29,400) and should reverse lower from there and enter a 'C' wave decline - with ~26,000 as its primary downside target. "*

So far, the Hang Seng has plunged 15% in a few weeks as the SSE lost about 10%. *Déjà vu? IT*

### **STOCK INDICES**

**07/29/21 - STOCK INDEXES** are creating another round of divergence at what is expected to be a 3 - 6 month (or longer) peak. All of the indexes fulfilled the 1 - 2 year outlook from 2020 that forecast a major advance from March '20 (when multi-year cycles bottomed) into **May/June '21**.

They also fulfilled 6 - 12 month outlooks from Nov '20 when equities fulfilled projections for a Sept/Oct correction and corroborated the overall outlook for surges into **May/June '21**.

To begin 2021, stock indexes added another level of affirmation - setting decisive (higher) lows in early-March while fulfilling intermediate downside objectives and holding intermediate support - projecting a subsequent 2 - 3 month rally into **May/June '21**.

Most of the indexes fulfilled that cycle peak - topping in **May/June '21** and triggering 15 - 30% corrections in a diverse array of sectors and stocks. Those stocks and indexes - with the DJTA and Russell 2000 in the lead - were projected to initially bottom during the week of July 19 - 23, with July 19 forecast to create a blow-off low in a majority of stocks.

During that time frame, many completed multi-month declines, as airline (AAL, DAL, LUV & UAL) and other transportation stocks dropped 25 - 30%, key energy stocks dropped 20 - 30% (BP, MRO, APA, SLB, HAL, etc.), many metals stocks dropped ~20% (with some, like AEM, NEM, etc. stretching those losses into **July 23** cycle lows).

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

Financial stocks took a hit with key bank stocks like C & BAC down 15 - 20% during this period. And one of the primary 'proxy stocks' - that was cited in reference to a July sell-off (NFLX) - dropped almost 10% from July 15 - July 23.

Price action validated the potential for a July 19 blow-off low with many indexes spiking right to their weekly *HLS* (extreme downside target) and rising weekly 21 *MAC* support as the Russell 2000 retested 5+-month lows and held, while fulfilling a ~6-week low-high-high-high-(low) *Cycle Progression* (which was part of the evidence cited when the **Weekly Re-Lay** projected that July 19 blow-off spike low)...

At the risk of sounding like a broken record, those remaining strong indexes are like the final cars of the train - on an old wooden roller-coaster - reaching and ultimately passing the summit, before an accelerated decline. While the others (those that already passed the summit) will do some slow descending, they cannot accelerate lower until all the 'cars' are in sync.

Looking out beyond Sept. '21, another multi-month high is still expected in **Jan./Feb. '22** - 8 months from the **May/June '21** cycle high in most stocks - reinforcing the overall *16-Month Cycle* as well as the uncanny *2-Year Cycle*...

The European **STOXX 600 Index** initially peaked in mid-June but could only make it down to intermediate support (~**445.0**) while dropping into multi-week cycle lows on ~**July 19**. That spurred a rally to new highs, consistent with its weekly trend pattern. It would not signal a top until a weekly close below **445.0**.

The German Dax Index is consolidating near its high - after spiking up into mid-June - tracing out a topping process that is expected to culminate an 18-year/5-wave advance illustrated in recent issues.

That would also fulfill a related 6-year low-low-high-(high) *Cycle Progression*... The 6-year cycle is play-

ing out similar to 2015 when the DAX helped lead a sharp sell-off... That was reiterated in the following manner in the April '21 *INSIIDE Track*:

*"There is an interesting parallel to these cycles. In Feb. 2015, INSIIDE Track described a scenario in which global indices were nearing a peak... focus was placed on the DAX (dubbed 'Last Man Standing') as the index to watch for a sign that a peak was taking hold... ushering in a bearish period in global indexes that saw a pair of sharp declines... the DAX is showing that a major peak could be imminent..."*

This latest analysis is from the Aug. '21 **INSIIDE Track** and reinforces what has been described for several months...

2021 is a MAJOR transition period - between *Currency Wars* and *Military Wars*, between the *Sunspot Cycle* nadir (Dec '19) and when solar storms are expected to accelerated and intensify (**2022 - 2024**), and between a multi-year stock bull market and its topping/reversing phase, etc. - and is already laying the foundation for **2022/2023**.

A myriad of major stocks (most of the 'proxy stocks' we cite) and indexes are completing multi-year 5-wave advances and projected to set decisive peaks in **late-'21/early-'22**. Some may have set multi-year peaks in **May/June '21**.

Possibly corroborating this, the US Dollar Index signaled a multi-year bottom in early-2021 and is expected to rally through 2022 even as Europe (Euro/DAX) is setting the stage for major declines as *European Unity Cycles* also transition.

For related analysis, refer to previous reports and issues of *INSIIDE Track* - detailing more specific expectations for these markets and many others. See **Weekly Re-Lay** and *INSIIDE Track* publications for the most current outlooks and strategies. **IT**

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

### July 2021 INSIIDE Track Analysis

## Outlook 2021/2022

### *Inflection Point*

**07-01-21** - There are certain times when it is strongly advised to step back, assess your surroundings, review your plan of action (or expectations), decide whether that plan needs any tweaking or revising, and then resume your forward progress.

*Now is one of them!*

One of the key reasons for that involves the stock market and the culmination of an uncanny **16-Month Cycle** that has been projecting a multi-month peak for **June 2021**. To put that in proper perspective...

**June '21** is 16 months from the decisive Feb. '20 peak - that preceded a ~40% correction; Feb '20 was 16 months from the Sept/Oct. '18 peak - that preceded a ~20% correction;

Sept/Oct '18 was ~16, ~32, ~48 & ~64 months from a series of lows in 2013 - 2017, creating a textbook 16-month low-low-low-low-high-high-(high) *Cycle Progression* and projecting a multi-month peak for **May/June '21** (see *HCP* diagram on page 3).

### Synergy

This stock market cycle peak is occurring as *Solar Cycle 25* is picking up steam and threatening to cause disruptions in the next 2 - 3 years (or longer; see June '21 *INSIIDE Track*). As stated last month:

*"2021/2022 has cyclic relation to many previous (significant) solar storms and is expected to be an unstable period... so many related market cycles could have a corresponding impact. They include inflationary cycles, interest rate cycles, stock market crash cycles, gold & silver cycles, and even US Dollar cycles..."*

This stock market cycle peak is also occurring as an **80-Year Cycle of War** is returning to greet America and the globe. The most recent occurrences were in 1781 (culmination of *Revolutionary War*), 1861 (onset of *Civil War*) and 1941 (US entry into World

War II). That cycle flows back for many centuries prior and has been documented for over a decade.

And it is occurring just as the latest **40-Year Cycle of Currency Wars** nears fruition in 2021....

Since 2013, *INSIIDE Track* has detailed this cycle and why it was expected to usher in another battle for currency supremacy - between fiat (debt-backed paper) currency and hard currency (gold/silver) - lasting from **2016 - 2021**.

*Digital currency joined in the fray.*

That was forecast to trigger a major advance in Gold from 2016 (termed *The Golden Year* beginning in 2014, due to expectations for the onset of a multi-year upswing in Gold to start in 2016) into 2021.

There were a series of related reports published in 2014 that detailed these expectations and also included ongoing analysis for 2019 - 2021 to see the recurrence of *Disease and Influenza/Virus Cycles*:

<https://www.insiidetracktrading.com/wp-content/uploads/2020/04/2016-The-Golden-Year-III.pdf>

At the time, all those expectations sounded a little extreme (at least to some readers that voiced their skepticism). *Nowadays, they don't look so crazy!*

There are also *Middle East War Cycles* that recur in 2021/2022. They have been discussed in many articles but one particular one detailed its overlap with the **11-Year Cycle of Stock Panics and Global Shaping Events** - described in Feb/Mar 2019.

[insiidetracktrading.com/wp-content/uploads/2020/04/11YC-Stock-Panics-Global-Shaping-Events-1.pdf](https://www.insiidetracktrading.com/wp-content/uploads/2020/04/11YC-Stock-Panics-Global-Shaping-Events-1.pdf)

That analysis explained how multiple cycles would converge in late-2019/early-2020 and trigger a 'global-shaping event' (Covid '19???) and resulting stock panic... while looking ahead to related cycles in **2021/2022**. IT

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

### July 2021 INSIIDE Track Analysis

#### STOCK INDICES

**07/01/21 - STOCK INDEXES** are at a major inflection point, fulfilling (or have recently fulfilled) the 1 - 2 year outlook for major advances from March '20 (when multi-year cycles bottomed) into **May/June '21**. That outlook was reinforced in Sept/Oct '20 when equities corrected and then triggered new 3 - 6 month signals - projecting surges into **May/June '21**.

To begin 2021, stock indexes added another level of affirmation - setting decisive (higher) lows in early-March while fulfilling intermediate downside objectives and holding intermediate support - projecting a subsequent 2 - 3 month rally (into ~**June '21**).

As they were fulfilling a myriad of *timing* and *cycle* projections, key indexes were also fulfilling 6 - 12 month, 3 - 6 month and 1 - 3 month *price* targets...

Market analysis often involves a slow, steady stream of revelations as a market is nearing an inflection point. That has been the case in stock indexes throughout the past ~14 months.

It began with multi-month and multi-year cycle lows projecting a bottom for March 16 - 23, 2020. That, combined with the preceding Jan/Feb '20 peak, projected a new bull market that was forecast to last into **May/June '21**.

As equities have repeatedly validated that outlook, they have revealed additional clues - pertaining to both price and time for a mid-2021 peak...

**3-31-21** - "The NQ-100 cash index has its primary LLH objective at **14,583/NQ**. That emerges from the Mar. '20 low of **6771** and the Sept. '20 low of **10,677/NQ**. The intriguing aspect of that objective is how closely it aligns with a basic Elliott Wave objective..."

*IF the Nasdaq 100 has rallied in 5 waves since the Dec. '18 low and IF the Mar. - Sept. '20 advance was the wave '3' rally (the dynamic and usually extended wave), THEN the wave '5' rally and the wave '1' rally should 'tend to-*

insidetacktrading.com

#### Stock Market 6 - 6.5-Year Cycle

*ward equality'.*

*The wave '1' rally was from 5,895 (Dec '18 low) up to 9,736 (Feb '20 high) - an advance of 3,841 NQ points. If the wave '5' rally - which began at 10,677 (Sept. '20 low) - also equaled 3,841/NQ, it would peak around **14,518/NQ**... very close to the **14,583 LLH** objective.*

*This index, more than any other, is shaping up for the potential of a pair of highs... A recurring 7-year cycle - that timed peaks in 2000 & 2007 - also returns in **2021**."*

The Nasdaq-100 rallied into mid-April and peaked at **14,041/NQ** ('v' wave peak) before pulling back. It then rallied into late-June and up to **14,572/NQ** (the June 29 high close) - precisely fulfilling this wave structure as well as the primary LLH objective and upside Elliott Wave target. Simply put, it fulfilled all of the upside objectives for the first half of 2021 (at the very least)... *but has not yet signaled a top...*

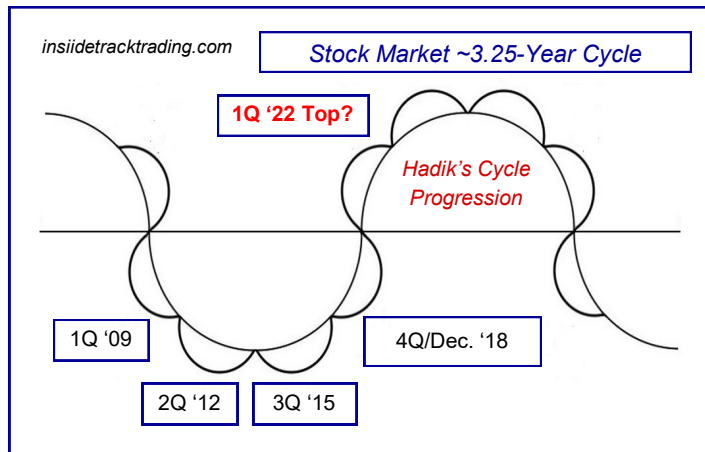

Those weekly cycles are being fulfilled as AMZN bumps up against the same resistance (~3500) it has encountered since Aug. '20...

*IF a peak and reversal lower takes hold in the first half of July, what would be expected to follow?*

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

### July 2021 INSIIDE Track Analysis

An initial 3 - 5 week sell-off would likely follow, consistent with cycles developing in many global stocks. At that point, the weekly trends would become a primary focus - helping to determine if additional downside is imminent... or will be delayed...

That could also be the time when equities begin to reveal what to expect from the next phase of the **16-month Cycle**. That cycle projects a future peak for **Sept./Oct. '22** but does not indicate whether that would be a higher (or lower) high. Intervening price action will help filter those expectations.

The more likely scenario is that it would be a lower high, following an initial decline and subsequent rally. The intervening **~8-Month Cycle** could provide some clarity, particularly if it sets a lower high in **1Q '22**.\*\*

[\*\*A multi-month peak in **Jan./Feb. '22** - 8 months from the **May/June '21** cycle high - would also reinforce another cycle that has been uncanny throughout much of the past decade - the **2-Year Cycle**. It would arrive 2 years from the Jan./Feb. '20 high, which was 2 years from the Jan '18 high that was 2 years from the Jan/Feb '16 low that was 2 years from the Jan '14 low.]

3 - 6 month & 6 - 12 month (and even 1 - 2 year) traders and investors should have just begun to lighten up on long positions and could [refer to current publications for latest trading strategies].

### Global Indices

**07/01/21** - China's **Shanghai Composite Index** remains in corrective mode after peaking in Feb. '21 while fulfilling a ~13-month low (Dec. '18) - high (Jan. '20) - high (**Feb. '21**) *Cycle Progression* (that should still hold for several more months)...

The SSE Index saw similar sell-offs in 2018 and 2012 - creating a 3-year cycle that has timed significant sell-offs in the second half of each of those years (some stretching into the first quarter of the ensuing year - 2013, '16, '19 & **2022?**). A weekly close below **3350/SSE** would validate this scenario and likely usher in a period of accelerated selling.

Hong Kong's **Hang Seng Index** remains on track to move lower into **Aug./Sept. '21** - when monthly cycles converge. Weekly cycles first converge in **early-Aug '21**, so a sharp 3 - 5 week sell-off is becoming more likely as the month of July begins. This index just tested its now-declining weekly **21 High MAC** (~29,400) and should reverse lower from there and enter a 'C' wave decline - with ~26,000 as its primary downside target...

The European **STOXX 600 Index** initially peaked in mid-June but needs to break below **445.0** to confirm a top. The German Dax Index is consolidating near its high - in a topping process that is expected to culminate an 18-year/5-wave advance illustrated in recent issues. That would also fulfill a related 6-year low-low-high-(high) *Cycle Progression*...

Many global indexes are reinforcing the potential for an initial sell-off in **3Q '21** - potentially bottoming (initially) in **Aug '21**.

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

### July 2021 INSIIDE Track Analysis

#### INTEREST RATES

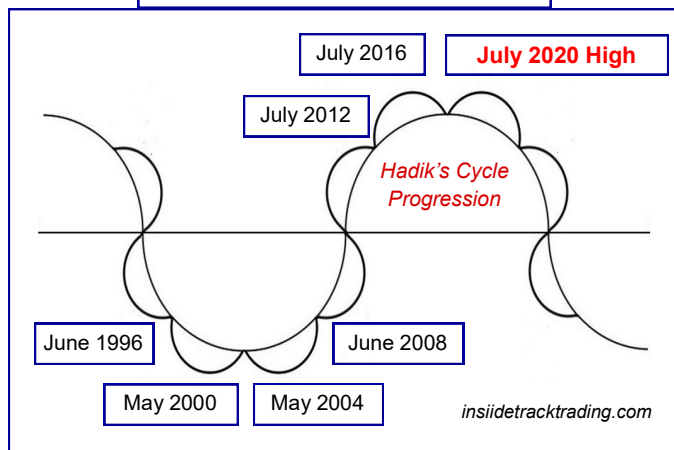

**07/01/21 - Bonds & Notes** remain on track for an overall advance into **July/Aug '21** - when they are expected to set a secondary peak (primary peak was July '20). A peak in **July '21** (ideal scenario) would arrive 1 year/360 degrees from when multi-year cycles peaked in July 2020 and complete a 50% rally in time (32 weeks down/16 weeks up), from the late-March low (**July 6 - 9** is precise week)...

The action of July/Aug '21 could powerfully reinforce the overall outlook for interest rates (inverse of Bonds/Notes). Bonds & Notes were projected to set a multi-year peak in **July '20** in perpetuation of an uncanny **4-Year Cycle** that timed multi-year highs in July '12 & July '16 and preceding lows in mid-2004 and mid-2008 (see diagram above).

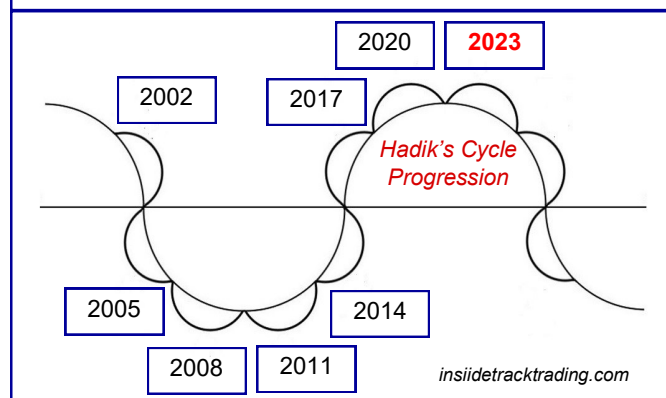

The next phase of that **4-Year Cycle** comes into play in **~July 2024** and should time another multi-year (secondary/lower) high.

In between those two major cycle highs, Bonds & Notes were/are expected to decline for 2 - 3 years and then rebound into **mid-2024**. That means that interest rates could slowly rise (and Bonds fall) in 2021 and 2022, possibly extending into 2023.

#### ~4-Year Cycle in 30-Year Bonds

#### ~3-Year Cycle in US Dollar Index

While cycles have projected that outlook for the past couple years, it was only in the past couple weeks that Fed Chairman Powell 'shocked' the markets by revealing an outlook that is uncannily similar to what cycles have been forecasting since 2019.

Longer-term investors and hedgers could have been liquidating long positions in Bonds & Notes and selling on intermediate rallies in 3Q/4Q '20. Wait until new rebound highs (above 2Q '21 highs) are set before adding to short positions...

From a broader, price-inflation perspective, commodities have seen an **~11-Year Cycle** (in keeping with the influence of Solar cycles) that created peaks in Sept/Oct 2000 and Sept/Oct 2011. That could push a final inflation/commodity price peak into **Sept/Oct 2022** - when other related cycles concur.

#### US DOLLAR/INT'L CURRENCIES

**07/02/21** - The **Dollar Index** is signaling a major bottom, having set it just above major support at **88.50 - 89.00/DX**. That likely completed a 4+-year 'A-B-C' decline and bottomed in sync with its uncanny 38 - 41 month cycle that recurred in **2Q '21**.

# INSIIDE Track

## "40-Year Cycle Transition - 2021 Finale"

### July 2021 INSIIDE Track Analysis

That should lead to another advance, stretching into **2023** - when an uncanny ~3-Year Cycle recurs. In the interim, it triggered short-term and intermediate buy signals in early-June...

The **EURO** is the inverse and reversed lower in early-June, fulfilling a ~5-month low (early-Oct '19) - high (early-Mar. '20) - high (early-Aug '20) - high (early-Jan. '21) - high (**early-June '21**) *Cycle Progression*. It has since sold off and is on the verge of turning its weekly trend down...

The **BRITISH POUND** is fulfilling the potential for a peak in **2Q '21** - perpetuating a 6.5 - 6.75-year low-high-high-(high) *Cycle Progression* and an intervening 3.25 - 3.5-year low-low-high-high-high-(high) *Cycle Progression*. It also matches the duration of the late-'16 - early-'18 rally...

**BITCOIN** has plunged after reaching its major upside objective **65,000 - 66,800/BT**. That was forecast to trigger an overall correction back to **~29,000/BT** - the 4th wave of lesser degree support (and also the 2021 intra-year low) - which was fulfilled in June. *IT*

Stocks, Bonds, the US Dollar and diverse currencies (including cryptocurrency) are reinforcing that 2021 is a MAJOR transition period - with the Dollar Index projecting a strong advance into/through **2022** and likely extending into **2023**. That should be a major wave 'V' - the culminating rally of an overall up-trend from the 2008 bottom.

European stocks and currencies (including Euro & British Pound) are projecting sharp declines into/through **2022** as *European Unity Cycles* are poised to enter a new phase in **2022**.

For related analysis, refer to previous reports and issues of *INSIIDE Track*. See **Weekly Re-Lay** and *INSIIDE Track* publications for the most current outlooks and strategies. *IT*

#### ~3.25 - 3.5-Year (39 - 42 Month) Cycle in British Pound

#### ~6.5 - 6.75-Year Cycle in British Pound

## "40-Year Cycle Transition - 2021 Finale"

### War Cycles (This Week in Money Interview)

6-24-21 - *Jim*: 2021 is also when you forecast the beginning of conflict or war cycles. Is that still the case?

*Eric*: Yes. I still am looking at that and certainly see some subtle signs that you often get in the early stages of something like that... a corollary or an off shoot of my *40-Year Cycle* and the currency wars that every other *40-Year Cycle* you also had very significant war cycles.

I was discussing that from a US perspective but then documenting it back to the 1200's in Europe and around the globe, some of your most significant conflicts and wars were on a very consistent *80-Year Cycle*. Where the US was concerned, most recently you had the culmination of the Revolutionary War in 1781. And that timed the onset or inception of the Civil War in 1861 even though the conflicts from the Bloody Kansas battles in the mid-1850's all the way up to 1861, that was something slowly building, but it was 1861 when that really kicked in in the US. 80 years later was 1941 when the US entered WWII even though that had been going on for many years.

2021 is when you get the next phase of that cycle that stretches out really from 2021 into at least 2025. Looking for other signs, you could certainly see growing tensions that trace back several years to the middle of the 20 teens were the tensions between the US and Russia, US and China, other countries and China, other countries and Russia... conflicts that have been smoldering. And I expect to see some flaring up of that in the coming years. [June 24, '21 *This Week in Money* interview.] IT

HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY A PARTICULAR TRADING PROGRAM. ONE OF THE LIMITATIONS OF HYPOTHETICAL PERFORMANCE RESULTS IS THEY ARE GENERALLY PREPARED WITH THE BENEFIT OF HINDSIGHT. IN ADDITION, HYPOTHETICAL TRADING DOES NOT INVOLVE FINANCIAL RISK AND NO HYPOTHETICAL TRADING RECORD CAN COMPLETELY ACCOUNT FOR THE IMPACT OF FINANCIAL RISK IN ACTUAL TRADING. THE ABILITY TO WITHSTAND LOSSES OR ADHERE TO A PARTICULAR TRADING PROGRAM IN SPITE OF TRADING LOSSES ARE MATERIAL POINTS WHICH CAN ADVERSELY AFFECT ACTUAL TRADING RESULTS. THERE ARE MANY OTHER FACTORS RELATED TO THE MARKETS IN GENERAL OR TO THE IMPLEMENTATION OF A SPECIFIC TRADING PROGRAM WHICH CANNOT BE FULLY ACCOUNTED FOR IN THE PREPARATION OF HYPOTHETICAL PERFORMANCE RESULTS -- ALL OF WHICH CAN ADVERSELY AFFECT ACTUAL TRADING RESULTS.
